Abstract

As long as the internet has become a powerful information weapon in our current living and developing time, it serves as an important factor in propaganda and propaganda of ideological and ideological threats on a global scale. With the help of social networks, special attention is paid to influencing the soul, consciousness and psyche of young people. As a result of this, youth spirituality continues to be derailed. Therefore, we should not ignore the escalation of various ideological, ideological and information attacks. Only then will we achieve the upbringing of a spiritually harmonious person, a healthy generation in perspective.

Keywords: virtual social space, internet, spiritual threat, social network, terrorist and extremist groups, spirituality.

Experts believe that information is now becoming the most productive source of the economy. According to data from the US Institute for Strategic Studies, every dollar spent on an information product provides several times more profit than the dollar invested in the fuel and energy sector. This is only its economic aspect, and its political aspect is seen as achieving its own personal interests in extremely cheap, extremely favorable ways. From this point of view, today the information factor is becoming in the interest of certain forces, both politically and economically. Therefore, in ensuring the national security of the newly independent states, along with political, economic, military factors, its informational aspects are becoming more and more relevant.

At the moment, experts insist that along with the level of socio-economic development of any state, the power of Defense also depends on the information system and technologies. At the same time, it is worth saying that the computerization of various spheres of society's life, Electronic Communications, an electronic visual database, the use of modern information technologies, in addition to positive results, lead to an increase in the influence of a new "information weapon", which envisages an impact on information systems for the purpose of distortion. This, in turn, calls for the implementation of protective measures against the illegal use of information resources and telecommunications networks of our country and their impeccable functioning. When we talk about the globalization of information and the spirituality of the individual, the impact of any flow of information on the

individual's humanity, first of all, this issue is at the heart of our society. we must assume that the national security of our state lies. When we talk about this topic, first of all, the two issues become the actual point of the topic:

The first-information flow-ideological threat; The second is personality spirituality, that is, issues of immunity formed in the individual in relation to information of different types. The fact is that the flow of information, in its essence, is directed to a certain goal. Depending on how much personality it affects is carefully oriented towards the goal set before it. Naturally, the negative influence of the information flow, on the other hand, depends on the factor of perfection of the ideological protection system formed in them. The complexity of the situation with information ideological perception during the transition period, that is, even in the absence of sufficient democratic experience in terms of ideological competition in the state, society and individual. Most media listeners perceive any information on a political topic as official information. The nature and order of information serves as a kind of barometer of political tranquility and stability. An indicator of instability if a state of diversity of thoughts is manifested. it is interpreted as a kind of symptom that a problematic situation is occurring in the system of political relations.

First of all, the question arises of how the ideological immunity of the individual is formed today. Studying the issue from the point of view of the human factor, ideological immunity - not to fall under the influence of any information, depends first of all on that human consciousness-thinking, the sharpness of perception, the ability to make a deep observation. True, first of all, not all such abilities are equally developed. However, the formation of these abilities, the formation of cognitive skills, continues from the birth of a person until his formation as a person. In particular, an important place in this is occupied by the fact that a certain young person reads a lot, studies the history of his country, is brought up in a spirit of respect for customs, in a word, the formation of a national faith-national pride. Young people who appreciate the values of their nationality, who know their history, whose faith in the Motherland is formed, are unlikely to fall under the influence of information flows. Because at such a young age, a specific psychology and a specific approach to the issue appear. He begins to study a certain goal in any information Zamir. Under the former Union, the flow of information entering from abroad was tightly controlled. After independence, a wide path was opened to the flow of information. Naturally, residents who are still "in revenge" for information begin to "consume" incoming information without sorting it. They did not yet notice the difference in good and bad, necessary and unnecessary information, in a word, the perception of the population in order to distinguish its nonlinear from the stream of

unbiased information had not yet formed. Therefore complication is currently, especially noticeable. This sometimes leads to the fact that any information in a person is perceived as absolute truth.

A scientific analysis of the issue of the influence of virtual social space and information on the worldview of young people shows that at a time when the Internet Web is dominating many young people, attention should be paid to the following negative aspects of it:

- Activities of terrorist and extremist groups. That they are masking Islam and killing people, while doing religious propaganda and propaganda on internet sites.
- Instructions are given on how to use drugs and military weapons.
- The spread of all kinds of pornographic pictures and movies.
- The issuance of reasonable and unreasonable information.
- Increased promotion to “mass culture” entering from the West.
- promoting online games that promote depravity.

To avoid such negative information, it is necessary for each of us to be brought up in a national spirit, to deeply understand the meaning and true reasons for the political processes taking place in the world, not to fall into the whirlpool of “mass culture”, to have truthful information about what is happening around us, to become a holder of fundamental knowledge, In it, it is necessary to pay attention to the following negative aspects:

- Activities of terrorist and extremist groups. That they are masking Islam and killing people, while doing religious propaganda and propaganda on internet sites.
- Instructions are given on how to use drugs and military weapons.
- The spread of all kinds of pornographic pictures and movies.
- The issuance of reasonable and unreasonable information.
- promoting online games that promote debauchery.

All the above listed factors negatively affect the consciousness of young people. To avoid such negative information, it is necessary for each of us to be brought up in a national spirit, to deeply understand the meaning and true reasons for the political processes taking place in the world, not to fall into the whirlpool of “mass culture”, to have truthful information about what is happening around us, to become a holder of fundamental knowledge,

As a result of analytical studies, it was found that the electronic information environment is characterized according to the following typological signs:

- 1) an electronic information environment of any level is considered a complex structured object with a systematic nature.

2) the integrity of the electronic information environment means one thing with the concept of achieving systematicity, their harmony, it embodies the goals of education and upbringing in the implementation of the personal and professional model of a graduate of an educational institution.

3) in addition to being a factor affecting the effectiveness of educational and educational work, the electronic information environment is its tool, being able to carry out information monitoring based on established standards and following a set of rules of conduct in the information space.

Well, the formation of a culture of infoetics or information acceptance is one of the most important factors in the maturation of a harmonious generation.
